WIRELESS CHARGING

How does wireless charging work

With wireless charging, power is transferred via electromagnetic induction. While traditional charging requires power to pass through a wire, with inductive charging a device receives the power it needs through electromagnetic fields.

MAGSAFE

MagSafe is a magnetic technology developed by Apple that lets you wirelessly charge your Apple products (Airpods, iPhone 12 and up, and Apple Watch Series 4) using a compatible charger. The MagSafe magnets ensure that the device and charger align perfectly to get the maximum charging speed.

NFC

A Safer and Faster Way to Exchange Data

Near Field Communication (NFC) is a shortrange wireless communication technology that allows two electronics devices to exchange information in close proximity to each other. It uses radio waves to send data between devices. NFC officially supports distances up to 3.5 cm, but in practice it can reach up to 10 cm. Generally, this comes in two forms. Communication-to-devices or a readable signal.

FAST CHARGING

Fast Charging is an increasingly popular feature that allows you to charge up your device in just a fraction of the time it takes to do it the old-fashioned way. But not all products use the same type of fast charging-and not all chargers support the various standards.

ANC VS ENC

ANC stands for Active Noise Cancelling which is a technology present in some headphones and earbuds that dampens disturbing ambient noise. This noise blocker is produced by capturing the surrounding sound through the built-in microphones in the headphones or earbuds. The sound then gets analyzed and twisted so that the person wearing the audio device hears less ambient noise. This prevents the need to turn up the volume to compensate for background noise which is better for your hearing.

ENC stands for Environmental Noise Cancelling which is a different technology found in some headphones and earbuds that come with a microphone function. Background noise is suppressed by recording the sounds in the environment and then process them to create a opposite cancelling sound which will neutralize the noise. This way the speaker's voice will be heard clearly over the background noise.

BLUETOOTH TECHNOLOGY

As the technology evolved throughout the years, Bluetooth improved. Each version improved the data transfer speed, connection range, stability, security, and energy efficacy. We are currently on 5.3. Below are the five main versions of Bluetooth:

Version	Year	Data Transfer Speed	Maximum Range	Feature Introduced
1.0	1999	732.2 kbit/s-2.1 Mbit/s	10 meters	Speech only
2.0	2004	2.1 Mbit/s-24 Mbit/s	10-30 meters	Enhanced Data Rate (EDR)
3.0	2009	24 Mbit/s	30 meters	High Speed (HS)
4.0	2010	24 Mbit/s-25 Mbit/s	60 meters	Bluetooth Low Energy (BLE)
5.0	2016	25 Mbit/s-50 Mbit/s	240 meters	Dual Audio Connection
5.1	2019	25 Mbit/s-50 Mbit/s	400 meters	Bluetooth SIG
5.2	2020	25 Mbit/s-50 Mbit/s	400 meters	Bluetooth SIG

We could say that Bluetooth 5.0 has laid the basis for the new family of versions of this protocol. The last major update revolutionized Bluetooth 4, doubling the speed of file transfer and quadrupling the range, which is the distance over which data can be transferred between them. Since then, the rest of the versions have simply been refining small things.

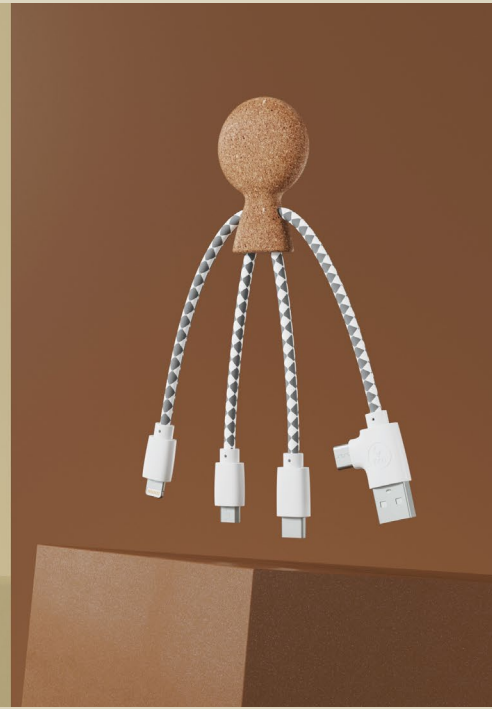

WHY DO WE CHOOSE GREEN TECHNOLOGY?

At the heart of the project from the start, the desire to give everyone access to the best of technology with a touch of fun. Oriented towards mobility, our accessories are designed to fit everyone's lifestyle.

Today, we adapt ourselves to be as close as possible to ecological concerns by committing ourselves to a more responsible production.

xoopar®

SUSTAINABLE MATERIALS

CORK

Cork is the bark harvested from the self-regenerating cork oak tree. Renowned for its durability, it stands as one of the most resilient organic materials, known for its ability to stabilize both air temperature and humidity levels.

WHEAT-STRAW

Wheat straw plastic is a composite material comprising 20% wheat straw and ABS/PP/PC. Wheat straw, primarily an agricultural byproduct after wheat grains are harvested, has gained traction as a filler for thermoplastic composites like polypropylene (PP) or acrylonitrile butadiene styrene (ABS). This innovative use of wheat straw as a filler not only aids in diminishing the volume of plastics utilized but also contributes to natural reusability.

BAMBOO

Bamboo, a sustainable marvel, embodies strength and eco-friendliness. Its rapid growth and regenerative nature make it an ideal choice for crafting technology items. This renewable resource offers durability, elegance, and a low environmental impact, aligning perfectly with our commitment to innovative, earth-conscious technology solutions.

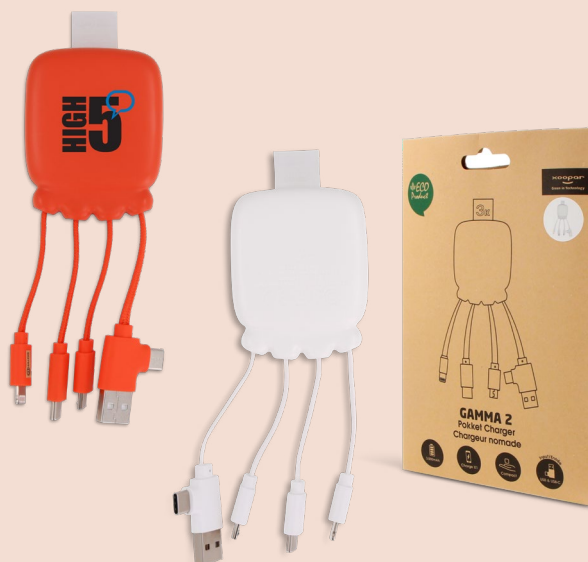

LT41020 | Xoopar Allure GRS PD Cable with data transfer

Power up smartly! Our GRS-certified charging cable handles up to 100W, compatible with MacBooks, laptops, tablets, and smartphones. Its smart smiley icon indicates fast (green) or regular (white) charging. Crafted from recycled aluminum and recycled plastic, it offers quality and sustainability, ensuring high-speed charging alongside data transfer. Size: 1100x23x10mm

LT41410 | 3192 | Xoopar Octopus Gamma 2 Bio Charging cable with 3.000mAh Powerbank

A pocket-sized powerbank that lets you boost your smartphone whenever you need it. The Xoopar Gamma 2 is a multi-charging cable with dual input connector USB-C / Lightning / Micro USB / USB and is made from recycled plastic bottles (RPET) and has an integrated 3000mAh powerbank. Xoopar products may not be sold in France and Spain. Size: 17x135x51mm

LT41014 | 4001 | Xoopar Iné Gamma Charging cable with NFC and 3.000mAh Powerbank

With this multifunctional powerbank you can use your devices anywhere without running out of power. The recycled leather gives the powerbank a natural look and also makes it the sustainable alternative to the ordinary powerbank. The NFC function also allows you to deliver your desired message in a sustainable way. Xoopar products may not be sold in France and Spain. Size: 150x55x15mm

LT41013 | 4000 | Xoopar Iné Smart Charging cable with NFC

This versatile adapter lets you charge all your devices (at the same time). The recycled leather also makes it the sustainable alternative to the regular adapter and the built-in NFC feature makes it an innovative way to show off your website/visit card/promotion. Xoopar products may not be sold in France and Spain. Size: 145x240x10mm
