**KG15DEPM**  
High glitter etched glass film

# 10 good reasons...

to choose a **HEXIS** self-adhesive film for decoration

- The films are stretchable and can stick to any shape, including the most extreme curves
- Vinyl surfaces are water-resistant and easy to wash
- Unlike paint, Hexis films do not need to dry and do not leave unpleasant or noxious odours
- Our films can create textured surfaces such as alligator, leather or carbon fiber effects
- Choose from a vast array of colours and special effects
- Hexis quality: our films are made using only high quality materials and pigments to ensure colour fastness and long durability
- Transparent films for glass application
- Surface protection from wear and tear, even bacteria (*see AM060 page 5*)
- Ease of installation: designs can be easily installed, changed or updated without the need for major upheaval to your living or office space
- Versatility: choose from general use and purpose-made films for a multitude of surfaces (*please see pages 20-21*)

Hexis would like to thank their customers who have contributed to this catalogue with their pictures.

## CRISTAL C4000

## Etched glass effect

- S5DEPM** Regular etched
- HX5DEPM** Regular etched with HEX'PRESS liner\*
- KG15DEPM** High glitter etched  
This new cast etched vinyl offers a higher glitter effect than etched S5DEPM and HX5DEPM.
- S6DE00** Removable etched
- S5DP03** Sparkle etched
- HX5DP03** Sparkle etched with HEX'PRESS liner\*
- E3GIVM** Frosted glass - short term  
The adhesive frosted effect is ideal for all short and medium term applications.

**\*HEX'PRESS liner:** fast & easy installation thanks to a structured surface on the liner. Ideal for outdoor application (if the temperature exceeds 10°C (50°F)) or dry indoor installation (wet application is not recommended with HEX'PRESS.)

*Reproduced colour samples are for guidance only. Real colour swatches are available on request*

## PREPARATION:

You can apply HEXIS films on a wide variety of media, provided that surfaces are clean, dry, smooth and non-porous (unless otherwise specified). Ensure there are no traces of oil, grease, wax, silicone or other contaminants. To avoid surprises, assume that all surfaces are contaminated and should be cleaned.

## CLEANING:

Clean surface appearance - For all non-porous surfaces: before applying the film on the surface to be covered, we recommend you clean it with a mild solution FINAL CLEANER No.3 Dry with a clean, lint-free cloth.

Soiled or old surfaces: clean the surface with a cloth soaked in cleaning solvent CLEANER No.2 and dry with a cloth before evaporation.

Caution: never spray the liquid directly on the surface, always on a cloth.

### Cristal C4000 & Etched glass

- Cut the film to a size slightly larger than that of the window (use the top right corner of the window as a guide to match with the top right of the film)
- Remove the liner protecting the adhesive surface whilst wetting it abundantly
- Use the HEXIS silicone window film squeegee (MPFSEC) to apply the film
- To dry the area near the edge of the film, use the MARNOIR squeegee wrapped in an absorbent paper
- For letters or small design graphics, a transfer tape is needed (see pictures)

Consult our application guides before use

➔ [www.hexis-graphics.com](http://www.hexis-graphics.com) > Professional > Application Guide

## Flat surfaces

- Wear cotton gloves (GANTCOV)
- Position the film on the surface
- With the help of masking tape or magnets, make a horizontal hinge on the top part, preferably on a flat surface
- Pull off 10 cm of liner and start applying the vinyl with a squeegee protected with a felt (MARBLEUF), making a 45° angle and applying from the centre to the edges
- When applying on flat surfaces, press down hard over the entire surface, pay extra attention to the edges
- Some products are available with HEX'PRESS liner: it offers easy and fast application especially useful for non-professionals

➔ [www.hexis-graphics.com](http://www.hexis-graphics.com) > Professional > Application Guide

## Curved surfaces

- Remove the liner
- Heat the vinyl between 40° and 50°C (104 and 122°F), then stretch it to wrap the convex surface
- Apply the vinyl over the whole surface using a plastic felt-covered plastic squeegee (MARBLEUF), making sure to gently brush it on the convex area to eliminate all tensions and folds
- Cut if necessary and reheat all the edges to 80° - 90°C (176-194°F) for the finishing
